**Location**

Women’s Institute Worcester Branch, Hallow, Worcester.
Large meeting room with tables and chairs.

**Problem**

The WI have regular speakers at their meetings.
Members were asking for a loop facility as they were unable to hear the speakers clearly, if at all.

**Solution**

Survey carried out to specify and quote for the best solution
Installed Induction Loop Amplifier with ceiling microphones.
The wiring for the ceiling microphones was fitted above the ceiling tiles so that it wasn't visible.
Flat copper strip loop wire was fitted under the carpet all round the room so didn’t cause any disruption to the room decoration.

Installation completed within 1 day for minimum disruption.

The system was set up at a comfortable level for users to hear clearly.
We were also able to demonstrate how the system works using a personal listener.

Installation tested with a Magnetic Field Strength Meter to ensure the system complies with British Standard IEC 118-4 BS6083 part 4.

**Feedback**

Following the installation the members have said how brilliant it is and how they can clearly hear the speakers at their meetings.
Members now feel included in the meetings and can participate fully.
The loop amplifier is simple to use. You only need to switch it on and the system is ready to go.
